

intertek

InView

Virtual Audit Program

Using technology to conduct audits, assessments, inspections, and oversight from a remote location.

Virtual Audit

Conducting an audit without being physically present at the audit location.

To facilitate global trade and manage risk in regulated environments, an audit is necessary to comply with regulations to ensure the quality of products and services are as advertised need frequent audits. However, in these challenging times, frequent on-site audits can be costly and in some cases ineffective.

Benefits of InView

Business Continuity

Audits can still take place regardless of threats such as extreme weather or terrorism

Cost Reduction

Reduction in costs associated with audits including travel expenses and auditor mentoring

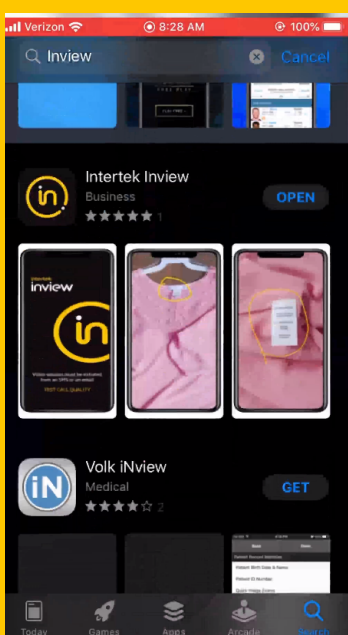

Audit Frequency

Potential for increased audit frequency for clients with remote locations

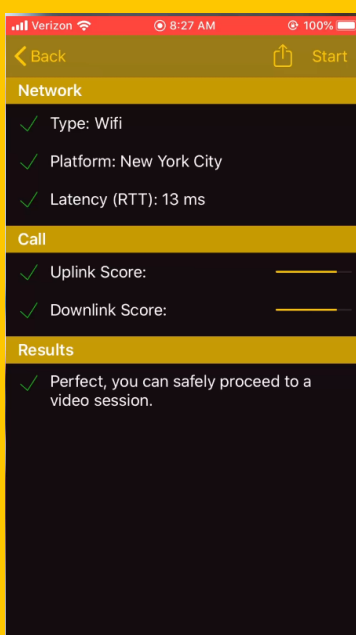

Time Efficient

Eliminate travel time, increase audit frequency, and reduce report writing time

Step by Step

Search and download the InView App from your app store. The Intertek InView app can be found in the iTunes Store and in the Google Play store.

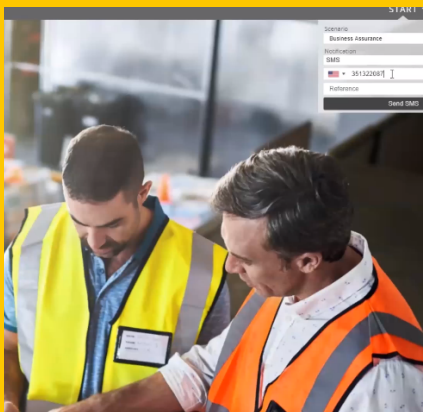

Before you start your virtual audit, you should test the app to ensure it's opening, connecting to wifi, and able to make a call.

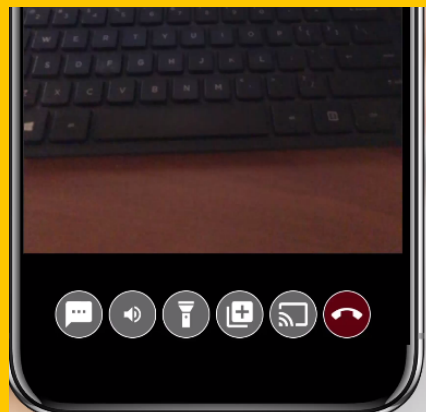

This is important to set up and test BEFORE your scheduled audit.

Intertek will send the harness to the onsite participant. This way, the onsite participant can attach their phone to the holster, offering an easy, hands-free remote audit.

Although the camera is affixed to the onsite participant using the Intertek harness, the offsite Intertek auditor is able to control the app remotely.

The offsite Intertek auditor will initiate the audit session to the onsite participant via email or SMS. The onsite participant can also control the app.
